Mirror Muffs Guide

With UAC's Mirror Muffs frozen mirrors are no longer a problem! Below is few points about them to help you enjoy them to the fullest.

NEVER DRIVE WITH MIRROR MUFFS INSTALLED ON YOUR MIRRORS

1. Select a Mirror to cover.

2. Slip the Mirror Muff over your mirror and pull the drawstring tight using the cord lock to secure it in place. The drawstring should be pointed toward the ground for maximum water resistance.

3. There should now be a tail hanging down. Tuck this tail in the edge of the cover to keep the wind from blowing it around. This will also protect your paint from the cord wearing up against it.

- Marine vinyl is a tough material that can withstand the cold but can sometimes be a little stiff. To help with this, Pull the drawstrings tight when they are not in use and this will help the material flex when you install them.
- Do not install on wet mirrors or if the covers are wet on the inside.
- Enjoy!
